Executive Summary	23

Part A: Global Energy Trends **31**

1	Introduction and scope	33
	1.1 The scenarios	34
	1.2 Developing the scenarios	41
	1.2.1 Inputs to the modelling	45
	1.2.2 International prices and technology costs	51
2	Overview	63
	2.1 How much energy does the world need, and where?	64
	2.2 Where now for energy in the United States?	68
	2.3 What does China's "energy revolution" mean for its energy outlook, and for the world?	72
	2.4 What is the next move for energy-related CO ₂ emissions?	77
	2.5 How much do energy policies matter?	81
	2.6 Are new technologies bringing us closer to universal access to electricity?	85
	2.7 Is natural gas a fuel in good shape for the future?	89
	2.8 Can oil prices stay lower for much longer?	93
	2.9 Is the future switching towards electricity?	98
	2.10 Is offshore energy yesterday's news or tomorrow's headlines?	103
3	Energy, emissions and universal access	107
	3.1 Introduction	108
	3.2 Recent trends and developments	110
	3.3 Trends in the New Policies Scenario	114
	3.3.1 Outlook for energy access	114
	3.3.2 Outlook for energy-related GHG emissions	117
	3.3.3 Outlook for energy-related air pollution	125
	3.4 The Sustainable Development Scenario	129
	3.4.1 Background	129

	3.4.2 Methodology and key assumptions	130
	3.4.3 Trends in the Sustainable Development Scenario	136
	3.5 What does it take to achieve a faster low-carbon energy transition?	148
4	Outlook for oil	153
	4.1 Recent market and policy developments	154
	4.2 Trends by scenario	155
	4.2.1 Market dynamics to 2025	155
	4.2.2 Long-term scenarios to 2040	156
	4.3 A closer look at the New Policies Scenario	162
	4.3.1 Demand	162
	4.3.2 Supply	174
	4.3.3 Refining	189
	4.3.4 Trade and oil security	192
	4.3.5 Investment	200
5	Outlook for coal	203
	5.1 Recent market and policy developments	204
	5.2 Trends to 2040 by scenario	205
	5.2.1 Market dynamics to 2025	205
	5.2.2 Long-term scenarios to 2040	206
	5.3 A closer look at the New Policies Scenario	210
	5.3.1 Demand	210
	5.3.2 Supply	213
	5.3.3 Regional insights	218
6	Power markets and electrification	229
	6.1 Recent market developments	230
	6.2 Electricity demand	233
	6.2.1 Trends to 2040 by scenario	233
	6.2.2 Electrification: changing sources of growth	234
	6.2.3 Electricity demand and economic growth	239
	6.3 Electricity supply	240
	6.3.1 Recent policy developments	240
	6.3.2 Power generation capacity	244
	6.3.3 Investment	250
	6.3.4 Electricity generation	256

6.3.5 Fossil-fuel consumption in power	261
6.3.6 Power sector CO ₂ and pollutant emissions	263
6.3.7 Technology costs and competitiveness	266
6.3.8 Support for renewables-based electricity	272
6.3.9 Power generation costs and electricity prices	276

7

Energy efficiency and renewable energy **281**

7.1 Introduction	282
7.2 Energy efficiency	282
7.2.1 Current status	282
7.2.2 Outlook for energy efficiency	285
7.3 Renewables	295
7.3.1 Current status	295
7.3.2 Outlook for renewables	298
7.4 Some implications	306
7.4.1 Investments in renewables and energy efficiency	307
7.4.2 The impact of renewables and energy efficiency on import bills	308
7.5 Interlinkages between energy efficiency and renewables	309
7.5.1 Demand-side response: a meeting point for energy efficiency and variable renewables-based electricity	311
7.5.2 Efficient supply of clean industrial heat	317
7.5.3 Expanding building energy codes to cover renewables	322
7.5.4 The multiple benefits of a joint approach	326

Part B: Special Focus on Natural Gas

331

8

Outlook for natural gas **333**

8.1 Recent market and policy developments	334
8.2 Trends to 2040 by scenario	335
8.2.1 Market dynamics to 2025	335
8.2.2 Long-term scenarios to 2040	337
8.3 A closer look at the New Policies Scenario	339
8.3.1 Demand	339
8.3.2 Supply	345
8.3.3 Regional demand and supply insights	350
8.3.4 Trade and investment	360

9	The new gas order	367
	9.1 Introduction	368
	9.2 The US shale storm and its repercussions	370
	9.2.1 Production	370
	9.2.2 Implications for North America	374
	9.2.3 Implications for global market dynamics	378
	9.3 The emergence of a new gas order	382
	9.3.1 Pricing of gas	382
	9.3.2 Contracts in gas trade	386
	9.3.3 Investments and security of supply	388
	9.3.4 Affordability of gas	394
	9.3.5 What underpins our New Policies Scenario?	396
10	The environmental case for natural gas	399
	10.1 The environmental credentials of natural gas	400
	10.1.1 Assessing the environmental credentials of natural gas	400
	10.2 Methane emissions: how big is the problem?	403
	10.2.1 Methane emissions from the energy sector	406
	10.2.2 Methane emissions from oil and gas operations	407
	10.3 Tackling methane emissions	418
	10.4 Costs and benefits of action on methane emissions	423
	10.4.1 Marginal abatement cost curves	424
	10.4.2 Climate impacts of methane emissions abatement	431
	10.4.3 Summary of costs and benefits	432
	10.5 An agenda for action	433
11	Natural gas in a changing energy world	437
	11.1 Introduction	438
	11.2 Historical perspectives on coal-to-gas switching	438
	11.3 Natural gas use in the New Policies Scenario	441
	11.3.1 Analysis by sector and region	444
	11.3.2 Limits to the environmental contribution of gas	447
	11.4 Natural gas in the Sustainable Development Scenario	449
	11.4.1 Analysis by sector and region	450
	11.5 Trade and investment	460
	11.6 Decarbonising gas supply	466

12	Energy in China today	471
	12.1 Introducing the special focus on China	472
	12.2 Energy trends in China today	474
	12.2.1 Energy demand	474
	12.2.2 Focus on energy in China's regions and provinces	481
	12.2.3 China and global energy markets	486
	12.3 Factors affecting China's energy development	491
	12.3.1 Economic transition	493
	12.3.2 Demographics and urbanisation	495
	12.3.3 Environment	496
	12.3.4 Investment	498
	12.3.5 Energy governance and policies	499
13	Outlook for China's energy demand	507
	13.1 China: shifting gears	508
	13.2 Overview	509
	13.2.1 Trends by fuel	510
	13.3 End-use sectors	512
	13.3.1 Industry	515
	13.3.2 Transport	523
	13.3.3 Buildings	530
	13.4 Power sector	538
	13.4.1 Background	538
	13.4.2 Trends in the New Policies Scenario	540
	13.4.3 Power sector reforms	545
	13.5 Environmental implications	554
	13.5.1 Energy-related CO ₂ emissions	555
	13.5.2 Energy-related air pollution	557
14	Outlook for China's energy supply and investment	561
	14.1 Overview of key supply and investment trends	562
	14.2 Coal	563
	14.2.1 Market structure and regulation	563
	14.2.2 Outlook for coal	568

14.3	Oil	572
14.3.1	Market structure and reform	572
14.3.2	Outlook for oil	575
14.3.3	Oil trade and refining	579
14.4	Natural gas	584
14.4.1	Market structure and reform	584
14.4.2	Gas imports	594
14.5	Renewables	596
14.5.1	Bioenergy	597
14.5.2	Hydropower	598
14.5.3	Solar	599
14.5.4	Wind	600
14.5.5	Geothermal	602
14.6	Nuclear	602
14.7	Investment	603
15	Global implications of energy policy reforms in China	607
15.1	Introduction	608
15.2	A recap of key trends in the New Policies Scenario	608
15.2.1	Demand trends	608
15.2.2	CO ₂ emissions trends	610
15.2.3	Key milestones reached in the New Policies Scenario	613
15.3	What if the macroeconomic transition is slower?	613
15.3.1	Macroeconomic transition in the New Policies Scenario	613
15.3.2	Implications of a slower economic transition	617
15.3.3	Conclusions	620
15.4	What if the clean energy transition is faster?	620
15.4.1	A possible pathway to a cleaner energy sector	621
15.4.2	China's investment needs in the Sustainable Development Scenario	627
15.4.3	Conclusions	628
15.5	Global implications of China's energy development	628
15.5.1	Oil, gas and coal markets	629
15.5.2	Low-carbon technologies	636

Annexes	639
Annex A. Tables for scenario projections	641
A.1. Fossil fuel production and demand by region	644
A.2. Energy demand, gross electricity generation and electrical capacity, and carbon-dioxide emissions from fossil fuel combustion by region	648
A.3. Global emissions of pollutants by energy sector and fuel	724
Annex B. Policies and measures by scenario	727
Annex C. Definitions	739
Annex D. References	753

List of figures

Part A: Global Energy Trends

Figures for Chapter 1: Introduction and scope

1.1	Global energy-related CO ₂ emissions	42
1.2	Change in total primary energy production and demand in IEA member countries relative to the Middle East, 2005-2015	43
1.3	Evolution of China policy targets and projections for solar PV installed capacity, and solar PV levelised costs, in selected WEOs	44
1.4	Range of prices paid by consumers for final energy, 2015	47
1.5	Average IEA crude oil import price by scenario and case	54
1.6	Natural gas prices by key region in the New Policies Scenario	55
1.7	Steam coal prices by key region in the New Policies Scenario	57
1.8	Evolution of global average cost for selected technologies in the New Policies Scenario	60

Figures for Chapter 2: Overview

2.1	Modern primary energy demand per capita by scenario	66
2.2	Share of IEA members and Association countries in world primary energy demand in the New Policies Scenario	68
2.3	US oil and gas production in the New Policies Scenario	69
2.4	Rise in US tight oil to 2025 in the New Policies Scenario	70
2.5	US net fossil fuel trade by fuel in the New Policies Scenario	71
2.6	Concentration of PM _{2.5} in China in the New Policies Scenario	73
2.7	Contribution of China to change in fossil-fuel demand and low-carbon generation in the New Policies Scenario, 2016-2040	74
2.8	China net fossil-fuel trade by fuel in the New Policies Scenario	76
2.9	World primary energy demand by fuel and energy-related CO ₂ emissions by scenario	78
2.10	Contribution of energy efficiency and renewables to global reductions in energy-related CO ₂ emissions by scenario	81
2.11	Share of variable renewables in power generation in selected regions by scenario	83
2.12	Estimated value of global fossil-fuel consumption subsidies	84
2.13	Population without access to electricity in the New Policies Scenario	86
2.14	Cumulative population gaining access to electricity in the New Policies Scenario and the Energy for All Case, 2017-2030	88
2.15	Growth in natural gas demand by sector and by region in the New Policies Scenario, 2016-2040	90
2.16	Global gas trade by mode in the New Policies Scenario	92
2.17	Change in world oil demand by sector in the New Policies Scenario	95
2.18	Powertrain cost comparison of conventional and electric cars in selected regions in the New Policies Scenario, 2025	96
2.19	Global end-user energy expenditure by fuel and by scenario	99
2.20	Cumulative global energy investment by scenario, 2017-2040	100
2.21	Global offshore production and generation by scenario	104
2.22	Average annual offshore energy investment by scenario	105

Figures for Chapter 3: Energy, emissions and universal access

3.1	People without access to electricity and clean cooking facilities	110
3.2	Change in global economic output, energy-related CO ₂ and air pollutant emissions	111
3.3	Number of people without electricity access by region in the New Policies Scenario	115
3.4	Premature deaths from household air pollution and population lacking access to clean cooking in the New Policies Scenario	117
3.5	Three speeds of CO ₂ emissions growth in the New Policies Scenario	118
3.6	CO ₂ emissions per capita for selected regions in the New Policies Scenario	120
3.7	CO ₂ emissions from oil use in transport and coal use in power generation in the New Policies Scenario	123
3.8	Annual CO ₂ emissions growth by sector and by fuel in the New Policies Scenario	124
3.9	Change in air pollutants emissions by region and premature deaths from outdoor air pollution in the New Policies Scenario, 2015-2040	125
3.10	Global energy demand and air pollutant emissions by sector in the New Policies Scenario	128
3.11	Connecting individual policy targets in the Sustainable Development Scenario	130
3.12	The Sustainable Development Scenario relative to other recent decarbonisation scenarios	134
3.13	Impacts of the Sustainable Development Scenario relative to the New Policies Scenario, 2040	137
3.14	Shares of population exposed to various PM _{2.5} concentrations by WHO interim targets/guidelines in selected regions by scenario	138
3.15	Global CO ₂ emissions reductions in the New Policies and Sustainable Development Scenarios	139
3.16	Air pollutant emissions savings by policy area in the Sustainable Development Scenario relative to the New Policies Scenario, 2040	140
3.17	Key indicators for India in the Clean Energy Ambition Case and the New Policies and Sustainable Development Scenarios	142
3.18	Fossil-fuel demand by scenario and decline by sector in the Sustainable Development Scenario relative to the New Policies Scenario, 2040	145
3.19	Power generation by source (left) and installed capacity (right) in the Sustainable Development Scenario, 2040	146
3.20	Cumulative investment needs by sector in the New Policies and Sustainable Development Scenarios, 2017-2040	147
3.21	Fossil-fuel import bill savings in importing regions in the Sustainable Development Scenario relative to the New Policies Scenario, 2040	148
3.22	Deployment levels of electric cars and solar PV by scenario	150
3.23	Additional average annual investment needs and changes in energy demand in the Faster Transition Scenario relative to the Sustainable Development Scenario	151

Figures for Chapter 4: Outlook for oil

4.1	Difference in oil demand by sector in the Low Oil Price Case relative to the New Policies Scenario	159
4.2	Changes in oil production by region in the New Policies Scenario and Low Oil Price Case	160

4.3	Change in global oil demand by sector in the Sustainable Development Scenario, 2016-2040	161
4.4	Change in global oil demand by sector in the New Policies Scenario	164
4.5	Global road freight fuel demand by vehicle category in the New Policies Scenario	167
4.6	Global GDP, total primary energy demand, CO ₂ emissions and chemicals demand trajectories in the New Policies Scenario	169
4.7	Change in global oil product demand for petrochemical feedstock in the New Policies Scenario	170
4.8	Potential additional impact of material efficiency improvements on oil demand for plastics production, 2040	172
4.9	Change in global oil product demand in the New Policies Scenario, 2016-2040	174
4.10	Change in non-OPEC and OPEC oil production in the New Policies Scenario	176
4.11	Reductions in the capital cost per barrel for developing conventional oil projects	180
4.12	Evolution of average capital cost per barrel for conventional oil projects by scenario	181
4.13	US tight liquids production in the New Policies Scenario	183
4.14	Deepwater and ultra-deepwater production by region in the New Policies Scenario	185
4.15	Change in crude oil trade by region in the New Policies Scenario	192
4.16	US oil net trade balance in the New Policies Scenario	194
4.17	Change in crude export availability in the Middle East in the New Policies Scenario	195
4.18	Asia Pacific crude oil imports and the Middle East's export availability in the New Policies Scenario	196
4.19	90-days oil demand and stockholding coverage of IEA member countries in the New Policies Scenario	198

Figures for Chapter 5: Outlook for coal

5.1	Global coal demand and share of coal in world primary energy demand by scenario	208
5.2	Average OECD steam coal import price and global coal trade by scenario	209
5.3	Incremental coal demand by key sector and region in the New Policies Scenario	212
5.4	Global trade by coal type in the New Policies Scenario	215
5.5	Average FOB cash costs for global seaborne steam coal trade and Richard's Bay FOB coal price	217
5.6	Delivered cost of coal and natural gas to different power systems in the United States	219
5.7	Auction results for solar PV in India	222
5.8	FOB cash costs for global seaborne steam coal trade	224
5.9	Change in net coal imports by key region in the New Policies Scenario, 2016-2040	226

Figures for Chapter 6: Power markets and electrification

6.1	Global power generation capacity additions for fossil fuels, wind power and solar PV	231
6.2	Evolution of electricity demand in the three <i>WEO</i> scenarios	233
6.3	Annual average growth of final energy demand historically and in the New Policies Scenario	235
6.4	Electricity demand by end-use in the New Policies Scenario	236
6.5	Relationship between electricity intensity of the economy and income, historically and in the New Policies Scenario	240
6.6	Installed power generation capacity by type in the New Policies Scenario	244
6.7	Share of renewables in total capacity additions by region in the New Policies Scenario, 2017-2040	245
6.8	Global average annual capacity additions and retirements by technology in the New Policies Scenario, 2017-2040	246
6.9	Top-five regions by installed capacity of nuclear power plants in the New Policies Scenario	250
6.10	Global annual average power sector investment and cumulative investment to 2040 in the New Policies Scenario	251
6.11	Average project cost, number of projects and capacity additions historically and projected in the New Policies Scenario	253
6.12	Total electricity generation by region in 2016 and growth to 2040 in the New Policies Scenario	258
6.13	Electricity generation by existing and new power plants by type in the New Policies Scenario	259
6.14	Share of total generation by type worldwide and in selected regions in the New Policies Scenario	260
6.15	Decoupling of global GDP growth and fossil-fuel consumption in electricity generation in the New Policies Scenario	261
6.16	Share of coal consumption by technology in electricity and heat production in the New Policies Scenario	262
6.17	Gas consumption in electricity generation with and without projected efficiency gains over time in the New Policies Scenario	263
6.18	Global power sector CO ₂ emissions by fuel in the New Policies Scenario	264
6.19	Reduction of power sector CO ₂ emissions in selected countries in the New Policies Scenario from 2016 to 2040	265
6.20	Pollutant emissions in the power sector by fuel with and without enhanced pollution controls in the New Policies Scenario	266
6.21	Historical and projected levelised costs of electricity by selected technology in the New Policies Scenario	269
6.22	Indicative annual costs and revenue needs for batteries and gas GTs in the United States and European Union, 2030	272
6.23	Renewables-based electricity support and cumulative total generation in the New Policies Scenario	273
6.24	Share of supported wind and solar PV generation by mechanism type in the New Policies Scenario	275
6.25	Average power generation costs by region in the New Policies Scenario	277
6.26	Average industry electricity prices by region and cost component in the New Policies Scenario	278
6.27	Average household electricity prices by region in the New Policies Scenario	279
6.28	End-user energy expenditure in the New Policies Scenario	280

Figures for Chapter 7: Energy efficiency and renewable energy

7.1	Share of global final energy consumption covered by mandatory efficiency regulations by sector	283
7.2	Global energy intensity reduction by scenario	285
7.3	Average annual change in final energy consumption in selected regions in the New Policies Scenario, 2016-2040	286
7.4	Energy intensity and energy use per capita in selected regions in the New Policies Scenario	287
7.5	Avoided final energy demand in 2040 due to energy efficiency policies by fuel, sector and region in the New Policies Scenario	289
7.6	Avoided industrial electricity use in motor systems by region and measure in the New Policies Scenario, 2040	291
7.7	Residential LED stock and lighting electricity demand in the New Policies Scenario	294
7.8	Renewable energy use by sector from a consumer perspective and by region in the New Policies Scenario	301
7.9	Renewable energy use by sector and source in the New Policies Scenario	302
7.10	Solar PV and solar thermal rooftop area in the New Policies Scenario	303
7.11	Potential sustainable feedstock and requirements to meet biofuels demand in the New Policies Scenario, 2040	305
7.12	Average annual global energy efficiency and renewables investments in the New Policies Scenario	308
7.13	Fossil-fuel net-import bills for selected regions and savings enabled by energy efficiency and renewables in the New Policies Scenario	309
7.14	Examples of technologies contributing to energy efficiency, renewables or electrification targets	311
7.15	DSR potential and generation from variable renewables in the New Policies and Sustainable Development Scenarios	313
7.16	Growth in global industrial heat demand by temperature level in the New Policies Scenario, 2016-2040	319
7.17	Change in global industrial heat supply mix by temperature level by scenario, 2016-2040	320
7.18	Floor area in residential buildings and CO ₂ emissions related to space conditioning and water heating in the New Policies and Sustainable Development Scenarios	323
7.19	Building energy performance levels in India's Energy Conservation Building Code (ECBC)	325
7.20	Change in key indicators in the New Policies and Sustainable Development Scenarios in 2040 relative to 2016	326
7.21	Global energy-related CO ₂ emissions abatement and key contributions in the Sustainable Development Scenario	327

Part B: Special Focus on Natural Gas

Figures for Chapter 8: Outlook for natural gas

8.1	Liquefaction capacity currently under construction by key countries and year of first commercial operation	336
-----	--	-----

8.2	World natural gas demand by scenario	338
8.3	Gas demand in selected regions in the New Policies Scenario	340
8.4	Key natural gas demand growth centres, additional use in the New Policies Scenario, 2016-2040	341
8.5	Change in gas demand versus price in Germany, United Kingdom and United States, 1983-2016	342
8.6	Annualised growth of global natural gas demand by sector in the New Policies Scenario	344
8.7	Coalbed methane production in selected countries in the New Policies Scenario	349
8.8	Russian gas exports by destination and aggregate utilisation of export capacity in the New Policies Scenario	351
8.9	Natural gas balance of the European Union in the New Policies Scenario	353
8.10	Change in natural gas production in selected developing countries in the New Policies Scenario, 2016-2040	357
8.11	Change in gas imports by selected region and transport mode in the New Policies Scenario, 2016-2040	362
8.12	Selected global gas trade flows in the New Policies Scenario (bcm)	363
8.13	Change in net gas exports by selected region in the New Policies Scenario	364
8.14	Evolution of the LNG vessel fleet and the average shipping distance in the New Policies Scenario	365

Figures for Chapter 9: The new gas order

9.1	US gas production by type in the New Policies Scenario	371
9.2	Rise in US shale gas output versus the steepest ramp-up in gas production in the Soviet Union	372
9.3	Average costs of resources developed in the New Policies Scenario by year and average Henry Hub price	373
9.4	Indexed production growth of selected chemicals in the United States in the New Policies Scenario	375
9.5	US pipeline gas trade by destination in the New Policies Scenario	376
9.6	Indicative well-head breakeven cost of various shale gas plays in North America	377
9.7	Selected LNG exports in the New Policies Scenario	379
9.8	US LNG net exports by destination and market share in the global LNG trade in the New Policies Scenario	380
9.9	Delivered cost of different sources of gas to Europe and Asia, 2025	381
9.10	Market shares in inter-regional gas trade by exporter in <i>WEO-2017</i> and the <i>WEO-2016</i> , 2040	382
9.11	Global long-distance gas trade by transport mode and pricing method in the New Policies Scenario	383
9.12	Total volume of LNG contracts concluded between 2011 and 2016 by size and duration	387
9.13	Already contracted versus projected global LNG capacity in the New Policies Scenario	389
9.14	Estimated average time to procure an extra 10% of LNG import volumes by selected importer in the New Policies Scenario	391
9.15	Annualised potential to reduce demand for gas by switching to coal in selected power systems	392
9.16	Fuel price evolution in North America and East Asia in the New Policies Scenario	395

Figures for Chapter 10: The environmental case for natural gas

10.1	Share of natural gas in total energy-related emissions of selected air pollutants and CO ₂ , 2015	401
10.2	Sources of methane emissions, 2012	404
10.3	Scope of methane emissions included in analysis	409
10.4	Ratio of measured emission factors to assumed or estimated emission factors from pre-2014 studies in the United States	410
10.5	Reported oil- and gas-related methane emissions for 2005 from the US Greenhouse Gas Inventory annual reports	411
10.6	Measurement studies for various facilities indicating the prevalence of super-emitting sources	412
10.7	Regional and sectoral breakdown of methane emissions from oil and gas operations, 2015	414
10.8	Comparison of recent assessments of global oil- and gas-related methane emissions	416
10.9	Greenhouse-gas emission intensity of natural gas compared with coal	417
10.10	Methane emission intensity of oil, gas and coal in the United States	421
10.11	Global marginal abatement cost curve for oil and gas methane emissions by source, 2015	426
10.12	Marginal abatement cost curve for oil- and gas-related methane emissions by region, 2015	428
10.13	Oil- and gas-related methane emissions in the New Policies Scenario with and without abatement measures	429
10.14	Oil- and gas-related methane emissions in the Sustainable Development Scenario with and without abatement measures	430

Figures for Chapter 11: Natural gas in a changing energy world

11.1	US electricity generation by fuel and related CO ₂ emissions	439
11.2	Historical fuel consumption shares by sector in the United Kingdom	440
11.3	Change in global primary energy demand by scenario, 2016-40	442
11.4	Global air pollutant emissions in the New Policies Scenario	443
11.5	Average CO ₂ emissions intensity of electricity generation in selected regions in the New Policies Scenario	444
11.6	Change in industrial energy consumption in China by type in the New Policies Scenario	446
11.7	Global gas consumption in road and maritime transport in the New Policies Scenario	446
11.8	Global primary energy demand in the Sustainable Development Scenario	449
11.9	Gas demand by region in the Sustainable Development Scenario	451
11.10	Share of coal and gas in energy demand in selected regions in the Sustainable Development Scenario	451
11.11	Gas demand by sector in the Sustainable Development Scenario	453
11.12	Natural gas-fired capacity and average utilisation rates in selected regions in the Sustainable Development Scenario	453
11.13	Average CO ₂ emissions intensity of electricity generation in selected regions in the Sustainable Development Scenario	454
11.14	Average and peak natural gas demand in Japan and the United States by sector in the Sustainable Development Scenario	458

11.15	Average and peak natural gas demand in Japan and United States in the Sustainable Development Scenario	460
11.16	Global pipeline and LNG trade by scenario	461
11.17	Average annual investment into gas infrastructure by scenario	462
11.18	Global gas demand in a “Disjointed Transition Case”	464
11.19	Global liquefaction capacity and demand in the New Policies Scenario and the “Disjointed Transition Case”	465

Part C: China Energy Outlook

Figures for Chapter 12: Energy in China today

12.1	Comparisons in average annual growth rates for selected indicators in China, 2000-2013 versus 2014-2016	472
12.2	China’s share of selected global indicators	473
12.3	Comparison of China’s primary energy demand by fuel and final consumption by sector with the rest of the world average, 2016	474
12.4	Primary energy demand by fuel in China	476
12.5	Annual power generation capacity additions by type in China	477
12.6	Power generation mix in China	478
12.7	Historical end-user energy expenditure in China	479
12.8	Total final energy consumption by sector in China	480
12.9	China’s provinces by population density and main regions in 2015	482
12.10	Total final energy consumption by sector in China, 2015	484
12.11	Total fossil-fuel production in selected countries, 2016	485
12.12	Primary energy production and total final energy consumption by fuel and region in China, 2015	486
12.13	Chinese coal imports by source, 2016	488
12.14	Refining capacity and demand for oil products in China	489
12.15	Solar PV exports from China, 2016	490
12.16	Changing structure of the economy in China (share of value added by sector)	495
12.17	China energy supply investments	499
12.18	China’s national administrative structure for energy	500

Figures for Chapter 13: Outlook for China’s energy demand

13.1	Primary energy demand per unit of GDP in selected regions in the New Policies Scenario	509
13.2	Energy demand by fuel in selected end-use sectors in China in the New Policies Scenario	515
13.3	Output of selected industrial products by region in China, 2015	516
13.4	Industrial development trajectory and energy intensity in China in a global context in the New Policies Scenario	519
13.5	China industry energy mix and related output by sector in the New Policies Scenario	521
13.6	Impact of a delay in the reduction of steel and cement production on total energy demand from industry in China, relative to the New Policies Scenario	522

13.7	Oil demand in China's transport sector, 2000-2016	523
13.8	China energy demand in transport by fuel and mode in the New Policies Scenario	526
13.9	China average annual growth of passenger car fuel use and vehicle stock by region and EV share in the New Policies Scenario	527
13.10	China passenger car ownership in selected provinces and two variations of future car ownership and oil demand	528
13.11	Average energy consumption, number of appliances and floor area per household in China's urban and rural areas	531
13.12	District heating network by province and share of urban population with access to natural gas in 2015	532
13.13	Indicators for the development of the services sector in China	533
13.14	China buildings energy consumption by fuel and end-use in the New Policies Scenario	535
13.15	China buildings heat demand by end-use and fuel in the New Policies Scenario	537
13.16	Installed capacity by technology in China in the New Policies Scenario	540
13.17	Electricity generation by fuel in China in the New Policies Scenario	542
13.18	Historical and projected levelised cost of electricity by selected technology in China in the New Policies Scenario	543
13.19	Electricity supply costs by component in China in the New Policies Scenario	544
13.20	Annual average investment for power plants and networks in China in the New Policies Scenario	545
13.21	Electricity generation mix by province in China, 2016	547
13.22	Total generation and curtailment of wind and solar PV in China	548
13.23	China electricity generation mix by region and net electricity trade flows in the New Policies Scenario	550
13.24	China hourly generation mix and electricity trade for the Northwest, North, East and Central regions in 2030	551
13.25	China average hourly wholesale energy market prices by region in the New Policies Scenario, 2040	554
13.26	Energy-related CO ₂ emissions by sector and peak year in China in the New Policies Scenario	555
13.27	CO ₂ emissions from the power sector in China in the New Policies Scenario	556
13.28	Concentration of PM _{2.5} in China in the New Policies Scenario	558
13.29	Emissions by air pollutant and by sector in China in the New Policies Scenario	559

Figures for Chapter 14: Outlook for China's energy supply and investment

14.1	Investments required versus investments actually made in coal mining in China	564
14.2	China domestic coal price evolution 2012-2017	565
14.3	China domestic steam coal production cost curve by mine size, 2016	566
14.4	Coal industry restructuring: production by selected province in China and mining capacity in the New Policies Scenario	567
14.5	China's coking coal demand by source and steel output by production route	569
14.6	China coal production by mine type in the New Policies Scenario	570
14.7	Coal mining productivity in selected countries	571

14.8	Breakdown of refining capacity in China, end-2016	573
14.9	China's oil production in the New Policies Scenario	577
14.10	Required annual investment for China's oil supply by production level	578
14.11	China's crude oil import volume and associated import bill in the New Policies Scenario	580
14.12	China's crude oil imports by origin and route	581
14.13	Gasoline and diesel demand in China in the New Policies Scenario	582
14.14	Trade balance of key refined products in China in the New Policies Scenario	584
14.15	Average natural gas import prices and average city-gate benchmark price in China	587
14.16	Natural gas demand in China and production by type in the New Policies Scenario	591
14.17	Indicative production cost ranges for different sources of gas in China, 2025	593
14.18	Natural gas imports in China by exporter and transport mode in the New Policies Scenario	594
14.19	Installed power generation capacity in China in the New Policies Scenario	597

Figures for Chapter 15: Global implications of energy policy reforms in China

15.1	Change in world primary energy demand by fuel in the New Policies Scenario	609
15.2	Energy-related CO ₂ emissions and per-capita energy-related CO ₂ emissions in selected regions in the New Policies Scenario	611
15.3	Timeline of major energy milestones for China, historical and projected in the New Policies Scenario	612
15.4	Demand for goods and services in selected sectors in China in the New Policies Scenario	614
15.5	Sectoral value-added contributions to overall economic growth in China, New Policies Scenario, 2016-2040	615
15.6	Share of exports by sector in total Chinese exports in the New Policies Scenario	616
15.7	Foregone benefits due to a slower economic and energy transition in China in the Current Policies Scenario relative to the New Policies Scenario, 2040	619
15.8	China CO ₂ emissions in the Sustainable Development and New Policies Scenarios	622
15.9	Concentration of PM _{2.5} in China in the Sustainable Development Scenario	623
15.10	Key indicators of China's low-carbon transition in the Sustainable Development Scenario	625
15.11	Additional average annual investment needs and change in fossil-fuel import bills in China in the Sustainable Development Scenario relative to the New Policies Scenario	628
15.12	China's net energy imports and share of global trade by scenario	629
15.13	China's crude oil import by origin in the New Policies Scenario	631
15.14	LNG imports and contracted volume by supplier in China in the New Policies Scenario	634
15.15	Natural decline of coal production versus retirement rates for China's coal-fired capacity	635
15.16	China's share of cumulative global investment in selected fuels and technologies in the New Policies Scenario	637
15.17	Global CO ₂ emissions savings from China's export of solar PV panels and batteries for electric cars by scenario	638

Figures for Annex C: Definitions

C.1	Liquid fuels classification	745
C.2	<i>World Energy Outlook</i> main country groupings	749

List of tables

Part A: Global Energy Trends

Tables for Chapter 1: Introduction and scope

1.1	CO ₂ price in selected regions by scenario (\$2016 per tonne)	48
1.2	Real GDP growth assumptions by region	49
1.3	Population assumptions by region	50
1.4	Fossil-fuel import prices by scenario	52

Tables for Chapter 2: Overview

2.1	World primary energy demand by region in the New Policies Scenario (Mtoe)	65
2.2	World primary energy demand by fuel and scenario (Mtoe)	79
2.3	Global energy investment by type and scenario, 2017-2040 (\$2016 billion)	101

Tables for Chapter 3: Energy, emissions and universal access

3.1	Selected recent climate change and air pollution policy developments	113
3.2	Selected climate and clean energy targets from sub-national actors including cities, states and companies	122
3.3	Selected policy priorities to address climate change and reduce air pollutant emissions in the Sustainable Development Scenario	133
3.4	World primary energy demand in the Sustainable Development Scenario (Mtoe)	144

Tables for Chapter 4: Outlook for oil

4.1	Oil and total liquids demand and supply by scenario (mb/d)	157
4.2	Oil demand by region in the New Policies Scenario (mb/d)	163
4.3	Selected recent initiatives for electric mobility	165
4.4	Remaining technically recoverable oil resources by type and region, end-2016 (billion barrels)	175
4.5	World oil supply by type in the New Policies Scenario (mb/d)	177
4.6	Non-OPEC oil production in the New Policies Scenario (mb/d)	186
4.7	OPEC oil production in the New Policies Scenario (mb/d)	189
4.8	World liquids demand in the New Policies Scenario (mb/d)	190
4.9	Refining capacity and runs by region in the New Policies Scenario (mb/d)	191
4.10	Cumulative oil and gas supply investment by region in the New Policies Scenario, 2017-2040 (\$2016 billion)	201

Tables for Chapter 5: Outlook for coal

5.1	World coal demand, production and trade by scenario (Mtce)	207
5.2	Coal demand by region in the New Policies Scenario (Mtce)	211
5.3	Remaining recoverable coal resources, end-2015 (billion tonnes)	213

5.4	Coal production by region in the New Policies Scenario (Mtce)	214
5.5	Coal trade by region in the New Policies Scenario	216
Tables for Chapter 6: Power markets and electrification		
6.1	Electricity demand by region and scenario (TWh)	238
6.2	Recent developments in regional power sector policies included in the New Policies Scenario	241
6.3	Cumulative power plant capacity retirements by region and source in the New Policies Scenario, 2017-2040 (GW)	248
6.4	Cumulative gross power plant capacity additions by region and source in the New Policies Scenario, 2017-2040 (GW)	249
6.5	Cumulative investment in the power sector by region and type in the New Policies Scenario, 2017-2040 (\$2016 billion)	252
6.6	World electricity generation by source and scenario (TWh)	257
Tables for Chapter 7: Energy efficiency and renewable energy		
7.1	Selected energy efficiency policies announced or introduced since mid-2016	284
7.2	Selected renewable energy targets proposed or introduced since mid-2016	297
7.3	World renewable energy consumption by scenario	299
7.4	Current status of DSR enablers in various electricity markets	314
7.5	Realising demand-side response potential	316
7.6	Common industrial low- and medium-temperature processes	318
Part B: Special Focus on Natural Gas		
Tables for Chapter 8: Outlook for natural gas		
8.1	Natural gas demand by region in the New Policies Scenario (bcm)	339
8.2	Remaining technically recoverable natural gas resources by type and region, end-2016 (tcm)	345
8.3	Natural gas production by region in the New Policies Scenario (bcm)	346
8.4	Natural gas trade by region in the New Policies Scenario	361
Tables for Chapter 10: The environmental case for natural gas		
10.1	Major voluntary methane emissions reduction initiatives	420
Tables for Chapter 11: Natural gas in a changing energy world		
11.1	Gas demand by region in the Sustainable Development Scenario relative to the New Policies Scenario	452
Part C: China Energy Outlook		
Tables for Chapter 12: Energy in China today		
12.1	Selected energy and economic indicators for China, 2000-2016	475
12.2	Selected indicators for population, GDP, energy use and trade by region and province in China, 2015	483

12.3	Selected key energy and environment indicators in China's 13th Five-Year Plan	494
12.4	Main state-owned energy-related enterprises in China	502
12.5	Main goals of China's Energy Production and Consumption Revolution Strategy, 2016-2030	504

Tables for Chapter 13: Outlook for China's energy demand

13.1	Primary energy demand by fuel in China in the New Policies Scenario (Mtoe)	511
13.2	China final energy demand by sector in the New Policies Scenario (Mtoe)	513
13.3	Key elements of the "Made in China 2025" initiative	514
13.4	Selected industry-related targets in China's 13th Five-Year Plan for 2020	518
13.5	Selected transport sector policies in China and selected cities	525
13.6	Selected policies for buildings in China	534
13.7	Key targets of the 13th Five-Year Plan for the power sector	539

Tables for Chapter 14: Outlook for China's energy supply and investment

14.1	Primary energy production in China in the New Policies Scenario	562
14.2	China coal demand, production and net trade in the New Policies Scenario (Mtce)	568
14.3	China oil demand, production and net trade (mb/d)	576
14.4	Remaining technically recoverable oil resources by type in China, end-2016 (billion barrels)	576
14.5	China natural gas demand, production and trade in the New Policies Scenario (bcm)	590
14.6	Total installed solar PV capacity by province at year-end 2016	599
14.7	Installed wind power capacity by province year-end 2016	601
14.8	Investments in energy supply in China in the New Policies Scenario, 2017-40 (billion \$2016)	604
14.9	Investments in low-carbon technologies in China in the New Policies Scenario, 2017-2040 (billion \$2016)	605
14.10	Investments in energy efficiency in China in the New Policies Scenario, 2017-40 (billion \$2016)	606

Tables for Chapter 15: Global implications of energy policy reforms in China

15.1	Major socio-economic trends in China and in developed countries in the New Policies Scenario	614
15.2	Changes in GDP by driver in China in the Current Policies Scenario relative to the New Policies Scenario	618
15.3	Performance levels for selected products by sector in China in the Sustainable Development Scenario	621
15.4	China primary energy demand by fuel in the Sustainable Development Scenario (Mtoe)	624

Tables for Annex A: Tables for scenario projections

A.1.	Fossil-fuel production and demand by region	644
------	---	-----

A.2.	Energy demand, gross electricity generation and electrical capacity, and carbon-dioxide (CO ₂) emissions from fossil-fuel combustion by region	648
A.3.	Global emissions of pollutants by energy sector and fuel	724

Tables for Annex B: Policies and measures by scenario

B.1	Cross-cutting policy assumptions by scenario for selected regions	728
B.2	Power sector policies and measures as modelled by scenario for selected regions	730
B.3	Transport sector policies and measures as modelled by scenario in selected regions	732
B.4	Industry sector policies and measures as modelled by scenario in selected regions	734
B.5	Buildings sector policies and measures as modelled by scenario in selected regions	736

List of boxes

Part A: Global Energy Trends

Boxes for Chapter 1: Introduction and scope

1.1	How has the <i>World Energy Outlook</i> evolved since 1977?	35
1.2	A new way to look at the world of energy	42
1.3	How might digitalisation affect the future of energy?	58

Boxes for Chapter 2: Overview

2.1	The US shale revolution in context	70
2.2	Air quality in China	73
2.3	Joining forces: how renewables and energy efficiency can be more than the sum of their parts	80
2.4	Fossil-fuel consumption subsidies: power takes the lead	84
2.5	Powering up off the grid	87
2.6	Does gas still work as a “bridge” in a world of cheap renewables?	93
2.7	When could electric cars beat conventional cars?	96
2.8	Are energy projects getting smaller?	102
2.9	Is there a chance to join up the offshore dots?	106

Boxes for Chapter 3: Energy, emissions and universal access

3.1	Sustainable Development Goals	109
3.2	The Montreal Protocol and the Kigali Amendment	112
3.3	What’s different in a Sustainable Development Scenario?	132
3.4	The Sustainable Development Scenario and the Paris Agreement	134

Boxes for Chapter 4: Outlook for oil

4.1	LPG: fuel for cleaner cooking	162
4.2	A material opportunity to improve global efficiency	172
4.3	Choosing value versus volume	179
4.4	Prospects for Canadian oil sands development in the New Policies Scenario	187
4.5	Oil security in the Sustainable Development Scenario	199

Boxes for Chapter 5: Outlook for coal

5.1	Coal's number one competitor in India: the sun	222
-----	--	-----

Boxes for Chapter 6: Power markets and electrification

6.1	Changing policy and market landscape in the United States	242
6.2	Will utility-scale batteries replace peaking power plants?	270
6.3	Offshore wind and bidding zero	275
6.4	The rise of electricity in end-user energy expenditure	279

Boxes for Chapter 7: Energy efficiency and renewable energy

7.1	Motor of change for industrial efficiency	290
7.2	LEDs: what role for electrification?	294
7.3	Relative merits of rooftop solar PV and rooftop solar thermal	303
7.4	Is an advanced biofuels revolution feasible with domestic and sustainable biomass supply?	305
7.5	Reaching carbon neutrality in a brewery	322
7.6	New building energy codes in India	325

Part B: Special Focus on Natural Gas

Boxes for Chapter 8: Outlook for natural gas

8.1	What happened to the "Golden Age of Gas"?	337
8.2	How floating technologies can enable gas market development	358

Boxes for Chapter 9: The new gas order

9.1	How the success of US shale may postpone the revolution elsewhere	378
9.2	What's the problem with oil price indexation?	385
9.3	The role of aggregators in LNG trading	390
9.4	How can Asian consumers benefit from the changes in gas markets?	393

Boxes for Chapter 10: The environmental case for natural gas

10.1	Public acceptance of unconventional gas: the "Golden Rules"	402
10.2	The pitfalls of global warming potentials (GWP)	405
10.3	Methane emissions glossary	408
10.4	Super-emitters: what are they and why are they problematic?	412
10.5	Selected sources of methane emissions and mitigation options	418
10.6	What you can learn from your LDARs	421

Boxes for Chapter 11: Natural gas in a changing energy world

11.1	Historical coal-to-gas switching in the United Kingdom	440
11.2	The role of natural gas in improving air quality	442
11.3	Is CO ₂ pricing the answer for gas?	448
11.4	Can natural gas be a zero-carbon fuel?	468

Part C: China Energy Outlook

Boxes for Chapter 12: Energy in China today

12.1	Chinese energy investments abroad	486
12.2	Looking back to the future: the China focus in <i>WEO-2007</i>	492
12.3	China's 13th Five-Year Plan	494

Boxes for Chapter 13: Outlook for China's energy demand

13.1	Why does energy demand growth in China slow?	510
13.2	I bike, you bike, e-bike	529
13.3	Are biomass and coal disappearing from households in China?	536
13.4	Regional hourly models with electricity trade	549
13.5	Improving the flexibility of coal-fired power plants in China	552

Boxes for Chapter 14: Outlook for China's energy supply and investment

14.1	Road to subsidy reform in China	574
14.2	The quest for oil security so far	580
14.3	Domestic small-scale liquefaction in China	596

Boxes for Chapter 15: Global implications of energy policy reforms in China

15.1	Looking ahead to 2050: establishing China's 2050 strategy	626
15.2	An upside for China's shale gas would prolong the pain for the global LNG industry	634

List of spotlights

Part A: Global Energy Trends

Why doesn't the IEA have a long-term forecast?	40
How can the IEA keep up with global energy demand(s)?	67
Which sub-national initiatives can help deliver the low-carbon transition?	121
India's Clean Energy Ambitions – How far from the Sustainable Development Scenario?	141
What would it take for oil prices to stay "lower for longer"?	158
Can deepwater developments adapt to the new investment climate?	184
The expanding role of smaller players in electricity supply	254
Tapping DSR potential for variable renewables integration	314

Part B: Special Focus on Natural Gas

What's the price for gas demand to grow?	342
Will Europe become the battlefield of a price war?	384
Lifecycle greenhouse-gas emissions: how do gas and coal compare?	416

Part C: China Energy Outlook

A trillion dollar question: what are China's energy consumers spending their money on?	479
--	-----
